Wasp and Bee Stings

OUCH!! Wasp and bee stings really hurt and can be dangerous, especially if you are allergic to them. My brother was attacked by a swarm of wasps in London, of all places, many years ago. He collapsed and was rushed to A&E and was in a bad way. My father was also allergic to wasp/bee stings.

We haven't seen too many wasps since we moved back to UK in 2011 but I remember a summer when my daughters were 6 or 7, we were visiting UK from overseas and wasps were everywhere. It was impossible to eat in the garden as so many wasps hovered over our food and drinks. They got in the house and even in the attic, where I got stung! We all got stung that summer but luckily, I had Apis Mellifica (Apis Mel) to hand.

When my Mother-in-law got stung, I gave her Apis Mel. After 15-20 minutes she said, "Jane, that's amazing! It's gone right down and is so much better."

That same summer, we took the girls to see Thomas the Tank steam train and the Fat Controller at Alresford Station. Wasps were everywhere and my daughter, Samantha, was stung along with a number of other children. I was handing out Apis Mel left, right and centre.

So, if there are a lot of wasps and bees buzzing around you, I suggest you have some Apis Mel to hand.

Apis Mellifica is a homoeopathic remedy. Homoeopathic remedies come in various dilutions but for wasp/bee stings 30C is an effective dose.

Directions

As soon as you have been stung, give Apis Mel 30C every 15 minutes for 3 doses. Then see how you go – wait half an hour or an hour and give another dose and perhaps one later depending on how you feel.

If you live in France or Germany – you can also buy Apisgel or Dapisgel. This is a gel that you can apply topically in addition to taking the remedy. Unfortunately, I cannot find it in UK. I used to be able to buy it in Asia.

Instructions for Taking Homoeopathic Remedies

1. Store at least 1ft away from anything electrical including sockets.
2. Take remedies in a clean mouth ie 20-30min after food or drink so not taste is in your mouth. If you have just been stung by a wasp and are eating or drinking – rinse your mouth with water.
3. After taking the remedy, do not eat or drink for 20-30 mins except for water. Also try to avoid strong smells.
4. When taking the remedy, ensure you do not touch it. Pour remedy into cap and toss under the tongue.
5. Do not drink coffee.

Note: Please don't put homoeopathic remedies through the X-Ray machine at the airport as it reduces the efficacy of the remedy.

Where to Buy Homoeopathic Remedies

Many health shops stock homeopathic remedies and Apis is well known for stings (also for jellyfish stings – so that's useful to know!). As I now live in UK, I order mine from Helios online. They also have homoeopaths on the phone who you can consult and remedies can be sent overseas.
